WCPSS Board Policy 4150

To the extent practicable, student populations at each school will provide an optimal opportunity for academic success for all students.

To the extent practicable, base school assignments will be within a reasonable distance of the student's home.

To the extent practicable, assignments will optimize the use of school facilities and transportation resources.

a. Student Achievement

Factors for consideration include:

1. providing an opportunity for families to apply to designated application schools;
2. minimizing high concentrations of low-performing students at each school; and
3. minimizing high concentrations of students from low income families at each school.

b. Stability

To the extent practicable, a student who is reassigned will have the opportunity to stay at the current school for one additional year if it is the terminal grade for an elementary or middle school (grades 5 and 8), and the student's siblings will be provided an opportunity to attend the same school for the one year period. The student and siblings must apply for these transfers at the designated time. To the extent practicable, any student currently in high school who is reassigned from an existing school to an existing school will be provided an opportunity to stay at the current school until the terminal grade (grade 12). The student must apply for this transfer at the designated time. Additional opportunities to remain at the current school, including for siblings, may be included in the annual student enrollment plan. A change in domicile does not preserve the previous school assignment. However, Early College and Magnet application assignments are valid through the terminal grade of the school.

c. Proximity

Factors for consideration include:

1. allowing students living within the immediate vicinity of a school, defined by the assignment plan, to attend that school; and
2. minimizing splitting of neighborhoods when developing base attendance areas.

d. Operational Efficiency

Factors for consideration include:

1. minimizing under-enrolled schools;
2. minimizing overcrowded schools; and
3. maximizing transportation efficiencies.”
